Product Information

Energy management systems (EnMS) in accordance with ISO 50001

Fossil fuels are becoming scarcer; the phasing out of nuclear energy in Germany has already been decided. It is not only in energy-intensive businesses that energy efficiency and operational energy management have become key subjects. Over the last few years, ever more companies have begun to recognise the importance of investing in energy efficiency, as this reduces energy costs and secures a competitive edge.

Energy management systems in accordance with DIN EN ISO 50001 are a suitable tool for reducing energy consumption and, therefore, for anchoring a company's energy costs in a structured and sustainable way. This system ensures a long-lasting systematic analysis of all energy consumption levels in the company; thus giving a clear picture of its energy situation and allowing costs to be traced back to their source. A functioning EnMS enables a company to consistently improve its energy-related performance.

This fact has also been recognised by the government. In Germany, government concessions, such as the special compensation regulation in accordance with § 40 ff of the Renewable Energy Act, are already linked to a certified EnMS in accordance with ISO 50001, and the future energy taxes (the so-called surplus settlement) will also be linked to this.

The advantages of GUTcert

We support our customers along the way to developing a functioning energy management system. If the organisation does not have anyone who specialises in energy issues, the GUTcert Academy offers Energy Manager/ Internal Energy Auditor training courses. We also offer specific training courses about the standard.

The organisation's appointed energy representative can introduce an EnMS step by step, based on our **Manual about efficient energy management in accordance with ISO 50001** and supported by our experts, who are always available to answer questions.

When the EnMS has been successfully installed, our auditors carry out the certification audit – always with the goal of giving our customers necessary recommendations that reach beyond the certification, helping you to continuously improve your EnMS.

Because we work closely with the relevant authorities, agencies, organisations and industries, we are always in touch with new developments in the energy sector. Our up-to-date newsletters inform our customers about new or proposed changes to the law and any other occurrences in the energy field – so that you can act accordingly, instead of being caught by surprise.

We meet annually with other experts to share and exchange knowledge, giving customers the chance to broaden their horizons, gather new input, and develop ideas together with like-minded people.

Product Information

Your benefits

- You tap into your business's energy-saving potential, recognise all influential factors and consistently reduce energy costs.
- You receive any available government concessions that are associated with a certified EnMS.
- You get early planning security for compliance with legal and contractual requirements.
- The optimised monitoring, control and regulation of energy flows and energy quality will ensure the continuity of your operational processes and therefore reduce production breakdowns caused by power cuts.
- Securing your energy supply minimises inconsistencies in product quality.
- You increase energy-related cost transparency in your business – individual employees will be aware that they have a continuous influence on the company's energy status.
- You make an active contribution to conserving resources and protecting the environment, thus acting in line with Corporate Social Responsibility (CSR) – improving both your image and marketing.

Costs

The ISO 50001 has a similar structure to the environmental management standard ISO 14001 and can therefore be relatively easily integrated into an existing system. We do, of course, offer combined audits in order to reduce both time and financial expenditure for our customers.

The calculation for your certification is individually tailored to suit you and is dependent on the type of interface and the size of the company. In order to send us the required information you simply need to fill out our online form. This contains a clear breakdown of all resulting costs for the certification. With us there isn't any "small print" – there won't be any additional costs.
