Copportunities and risks

Messe Berlin: "Just 1% less energy consumed per year results in a **cost saving for** us **of around** €100,000."

Frank Bro, Head of the Electrical Engineering/Energy Management Department

TSE AG, Technology and Service for Events: "The increased use of LED luminaires **saves approx**. **30-50% energy costs** at an event. [...] The additional costs for the new technology are only a small part of this saving, so the customer is better off in the end. We save on internal maintenance routines and the environment is helped as well. **So everyone is a winner**."

Peter Weinert, Member of the Board of TSE AG

German Protestant Kirchentag: "[It] was possible to save a large amount of material, as the weight of the scarf was **reduced by 40%.** [...] This meant that **1.6 tons of material could** be **saved.** There is still room for improvement [...] in the quantity calculation, because despite long-term planning, the assumed number of participants* was not reached and thus many scarves remained."

from: Updated Environmental Statement 2017, p.27, as of May 2018.

From the standard to the

Products proservices

Eco-friendly gummy bears as a promotional item:

"[...] The ecofair strategy of the **Kirchentag stipulates that** it must be an organic product. [...] Of course, a vegan product without gelatine would be preferable for reasons of sustainability. [...] After many tastings, the decision was made for delicious tasting organic gummy bears with gelatine. A compromise between the environment and marketing."

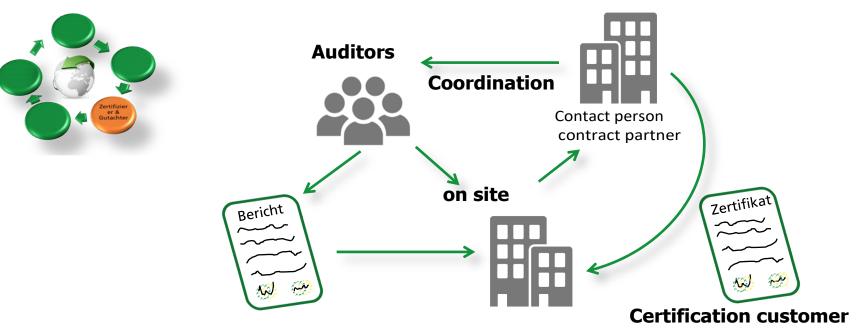

Green power at major events:

"[...] since on the one hand Messe Berlin, the largest venue, uses **green electricity** and in addition also the open-air venues [...]".

with system and certificate

"Sustainability and 'corporate social responsibility' should be more than just inflationary empty words: Simply perfecting corporate communications is not enough. Instead, we all need the courage to implement a holistic sustainability management system that is firmly anchored in the organization and serves as a role model for our employees in their everyday lives. If we plant the seeds for consumers to critically question their consumption according to the cradle-to-cradle principle, we are already in the midst of a continuous improvement process for a happier world."
