

## ISMS - Information Security according to ISO/IEC 27001

Security is one of our basic human needs - and an ISMS according to ISO/IEC 27001 is a management system that gives you the certainty that you have done everything necessary to secure all data in the best possible way. So you and your customers can go about your day's work with peace of mind.

### What does an ISMS offer you?

An ISMS links people, processes and systems that work together to achieve the common goal of "secure information processing". ISO/IEC 27001 offers a combination of management topics, such as a large proportion for risk analysis and treatment, and technical aspects with specifications for securing IT systems ("controls" in the annex to the standard). These include, for example, the classic password procedure, encryption procedures and supplier relations or compliance requirements.

Especially when your working environment and your business area are particularly demanding, it is essential to adequately secure all important information. In particular, the use of digital means and AI solutions clearly speak for an ISMS. For companies with already existing ISO management systems, it is particularly easy to integrate an ISMS according to ISO/IEC 27001 due to the uniform system structure (high-level structure).

### What is your benefit with an ISMS?

- ▶ You know your risks in information processing exactly and can thus concentrate fully on your actual business
- ▶ An ISO/IEC 27001 certificate gives your existing and potential customers the guarantee that data is in good hands with you
- ▶ Your image as a safe company gives you a competitive edge

# Important information

## What can you expect from us?

At GUTcert you benefit from many years of certification experience.

- ▶ Your company is unique: you receive a tailor-made, individual offer
- ▶ We guide you through the labyrinth of legal regulations into the "safety zone"
- ▶ You get expert knowledge and services from auditors with practical experience
- ▶ You will be professionally supported throughout the certification process

We also support operators of electricity and gas grids as well as energy plants through certification in accordance with the IT Security Catalogue (§11 (1a) and (1b) EnWG) and all companies classified as operators of critical infrastructures through audits in accordance with the KRITIS Ordinance.

Years of experience

Customer satisfaction (2022)

Auditor evaluation (2022)

Seminar evaluation (2022)

## Our offer

Our offer contains all the costs incurred for the entire certification period in a clear form. With us, there is no "small print" and no additional fees. Simply fill out our [form](#).
